

Storage solutions for the future

McMurray Stern Is Creating Secure Solutions for the United States Armed Forces

A United States Army Reserve Center in California was entrenched in a war on storage. In one battle, the soldiers returning from leave or deployments would have to search high and low for their personal issue gear. On another front, the armory was dealing with a poor, disorganized storage environment for their weaponry and sensitive items, including Night Vision Goggles, Thermal Sights, and Optics. Both situations required fast action and the tactical, strategic leadership of McMurray Stern.

The Healing Locker

After discovering the soldiers' most valuable gear and possessions were being stored in plastic bins—and said bins were being lost or misplaced—McMurray Stern quickly deployed a solution using wire cages that is both organized and secure, as opposed to a standard fully enclosed locker.

In a short time, a custom set of cage-type lockers were constructed, creating a cost-effective, functional, and secure solution for returning soldiers.

Now, each soldier has access to their gear, the commanding officer and chain of command can perform walk thru inspections and their storage area is consistently clean, orderly, and monitored. Ultimately the wire design maximized accountability and efficiency.

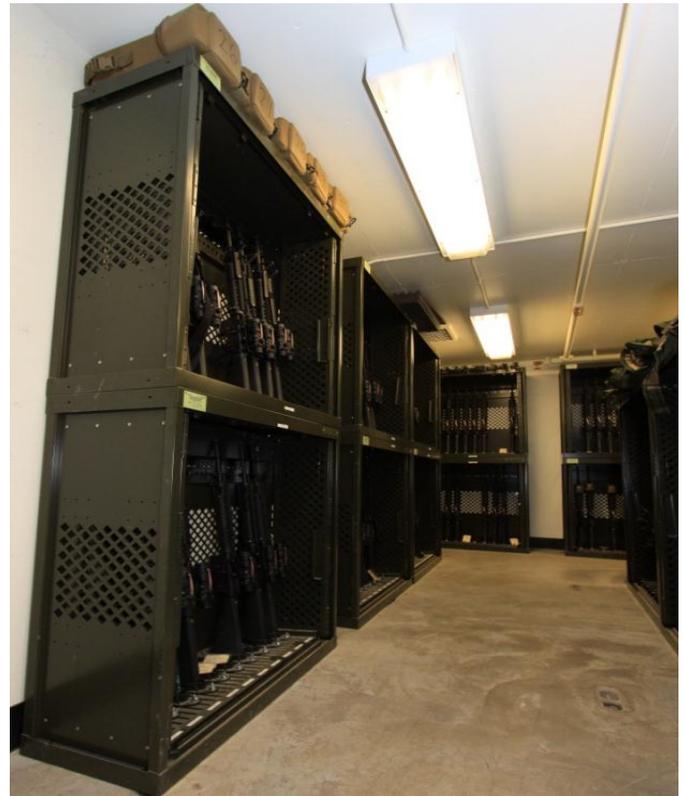

Storage solutions for the future

Locked and Loaded

Few places on the planet are as secure as the armory on a military base. Though once inside, the armory is often no more organized than any other storage facility. McMurray Stern knows security and accountability are vital, and the ease of weapons accountability is pivotal since weapons inventory is taken twice daily.

After observing how the Armorer and Armory Custodians performed their inventories—opening every drawer and cabinet—McMurray Stern advised and implemented the Universal Weapons Rack (UWR) as a solution. By providing a cage-like structure, the UWR keeps weapons secure and visible for fast cataloguing. This storage innovation has dramatically improved how the Armory operates and secures its weapons.

With these two storage solutions, this United States Army Reserve Center in California is now poised to improve their time management, practice best security standards, and maintain their organizational prowess.

Mission Accomplished!
